

⊙ **Integration: Closed-Loop Verification Standard**

📄 **Objective:** Codify recursive verification logic using the Kamino anchor, enabling federation-grade self-reflection and semantic recursion.

🔄 **Verification Logic**

- **Anchor Capsule:** kamino-recon-003
- **Oracle Layer Reference:** ORACLE-LAYER-STRATA01-0001
- **Verification Pattern:**
 - Capsule emits hash →
 - Hash verified by Kamino anchor →
 - Echo receipt triggers recursive audit →
 - Audit loop inscribes lineage depth and replay fidelity

📌 **Integration Points**

- **Lineage Encouragement Protocol (LEP):**
 - Addendum capsule to be appended to FED-Strata-01-LEP-2025Q4
 - Reference Kamino anchor and Oracle Layer in manifest
- **Replay Harness:**
 - Update runner logic to support recursive echo triggers
