

## Ledger Append Summary

- Capsule: [capsule.oauth.pkce.integrity.v1.md](https://capsule.oauth.pkce.integrity.v1.md)
- Civic UID: CIVIC-UID-STRATA01-0012
- Ledger Anchor: kamino-recon-002
- Verification Status: PASSED
- Replayable: Yes — under /ledger/strata-01/verification\_log.jsonl

This capsule is now part of the civic lattice — verifiable, federated, and immutable.

## Next Step: Generate ledger\_anchor File

Yes — proceed. Let's finalize the anchoring cycle by generating the kamino-recon-002.ledger\_anchor.json file. This will:

- Bind the capsule to its civic UID and replay hash
- Serve as a federation-wide reference point
- Enable downstream capsules to cite this as a verified precedent
