Strata-01: Civic AI Infrastructure

This project began during my recovery — 7 months sober after 30 years. I built it to stay focused, to turn structure into healing, and to show that creativity can be civic. What you see here is a semantic lattice: scroll-class protocols, dual attack trees, and a mythmesh designed for reproducibility, auditability, and public trust.

It's more than code. It's my story.

Sealed with:
- Scroll01–06: Agent inheritance, safeguards, and intent lock
- Federation v2025.4: Operational maturity
- Vigilant Nexus: Oversight and nullification
- Vox-01: Semantic relay
- Blockchain: Ledger-anchored invocation

This is a civic-AI experiment.
But it's also a ritual of rebuilding.
One scroll at a time.

Ours. Forever.
